Periodic Inspection & Maintenance Procedures

Because the Retro-Grate™ protective grating system manufactured by Halliday Products, Inc. is of all aluminum and stainless steel construction, it requires minimal maintenance. For optimum product life the manufacturer recommends the following procedures be performed annually:

1. Inspect all stainless steel mounting hardware to insure the anchor bolts are completely inserted into the concrete and that they remain tight and secure. If any loose anchor bolts are discovered, replace them immediately. Consult the factory for replacement anchor bolts.
2. Inspect the grating beams to ensure that they are seated at or beyond the line on the non-pivot support bracket. Consult factory if the grating beam isn't seated at least to the line.

3. Pivot the Retro-Grate™ to the open position to ensure the hold open latch automatically locks the grate in the open position. Remove any debris that inhibits the latch from moving freely without binding. Consult factory if the latch does not lock the grate in the open position.
4. Inspect both pivot bolts to ensure they are completely tightened into the pivot clevises.
5. Inspect for and remove any debris from the Retro-Grate™ and its support brackets.
